SUMMARY

I have acquired and honed relevant Data Science, Machine learning, Deep learning, and NLP skills. My skills include designing, evaluating, and executing advanced algorithms for data to drive solutions. Possessing strong communication skills and actively contributing to effective team work and collaboration

EDUCATION

Masters in Data Science, Gitam University (GPA: 7.75)

Aug '22 — May '24
Visakhapatnam, India

- Relevant course work: python, Machine learning, Deep learning, Natural Language Processing(NLP), SQL and MongoDB

Bachelor in Science, Sir.C.R.Reddy College (GPA: 7.69)

Jul '18 — Sep '21
Eluru, India

- Relevant Course Work: Mathematics, Statistics, Computer Science.

ACHIVEMENTS

Central Sector Scheme of Scholarships For College and University Students

Sep '01

Ministry of Education, Government of India

National Scholarship from the Ministry of Education for achieving the highest score in Class 12. Awarded throughout my bachelor's degree for consistent performance, merit and recognizes the work and accomplishments of students.

Academic excellence

Apr '01

Gitam

Achieved a 9.0 CGPA during my last semester for the Ultra Sound Nerve Segmentation project based on U-net architecture for the clear explanation and dedicated hard work during course work.

PROJECTS

Churn-Prediction-Using-ANN, self [Link](#)

Sep '24 — Sep '24

- Designed and implemented a customer churn prediction and salary estimation system using Artificial Neural Networks (ANN), covering data preprocessing, feature engineering, and model optimization.
- Deployed on Streamlit Cloud: Delivered an interactive web application for real-time churn and salary predictions, streamlining business decision-making processes.

Movie Reviews using Simple RNN, self [Link](#)

Nov '24 — Nov '24

- Classifying the reviews as positive or negative using the IMDB dataset with reviews as trainable parameters.
- Applied pad sequence which ensures all the movie reviews length should be equal.
- The project was executed with the simple RNN module, which gave us an accuracy of 80%.
- Pickle files were created during the development to make reusing these functions easy, which proved to be useful while deploying the project on streamlit could to provide more-enhanced and user-friendly interface.

Modular Coding and Production Deployment, self

Dec '24 Present

- I have worked on multiple projects in Machine learning, Deep learning, and NLP, for which I mainly developed and analyzed using Jupyter Notebook
- The Jupyter Notebook files give me insights into the data, what needs to be done to the data and what tasks need to be performed. Develop, improve, and write scalable production-ready code for deployment in the project.
- The modular programming for deployment in the project was done using files from the data integration, data preparation, data storage, model training and model evaluation stages. While pickle files and best-performing models were created
- CI and CD pipelines promote collaboration, bringing automation tools to ensure the deploying projects from running on local machines to deploying them on real-time challenges. Later, the projects can be deployed in AWS and Azure cloud Cloud Services.

SKILLS

Programming python

Database Technologies SQL, MongoDB

Data Visualization Matplotlib, Seaborn, Power BI

Data Analysis Numpy, Pandas

Machine Learning Scikit-learn, Tensorflow, Keras, PyTorch

Natural Language Processing NLTK

Version Control Tools Git
